

Hotel Management System (HMS)

Outline

A system for hotel management used by hotel staff, made up of smaller subsystems for hotel service automation, management of guest database among many others, a reservation management system, a billing system and even an event log.

Possible Modules

1. User Module (Here users are hotel staff, with a chosen higher up being administrator)
2. Guest Module (With guest database and functions to interact with other systems, Add/Update/delete/select guest, also to log all the services the guesy used)
3. Room management module (Has room details/database, func - > to add/delete/update status/select a room)
4. Reservation management module
5. Check – IN/OUT module
6. Billing Module
7. Service Management Module
8. Customer Service Module
9. An event log

Databases

- User database (hotel staff) (id, name, password, mail, contact no, designation)
- Guest database (id, name, ..bio, bad behaviour?)
- Room database (id, Number, Floor, Typer, price, additional beds, add bed no)
- Reservation database (id, guest_id, check_in time, check_out time, room_id)
- Billing/Payment databases (id, guest_id, room_id, services_id)
- Services databases (services used, time service used, service end time, staff/user_id)
- Admin/User log
